### Overview

C3-340 CORIO®matrix 4K is an ultra-flexible, modular, multi format AV matrix router. Leveraging tvONE's award winning CORIO® technology this is a one box solution for integrating mixed AV signals seamlessly at very low latency.

The CORIO®matrix is ideal for applications where mixed audio and/or video formats are used and require integration. For example, applications where SDI signals are used in conjunction as DVI or 4K HDMI – flexibility in input and outputs.

CORIO® technology means one can Up-scale, Down-scale and format Cross convert between a wide variety of analog and digital video formats.

The sixteen modular AV slots (4U chassis C3-340) provide ability to mix and match video formats in a switcher. The quantity and type of modules selected determines which formats will be accommodated and the matrix size (12+ input / output modules to choose from).

A single device solution means, simplicity of control and configuration. By removing the need for additional separate little scalers / format converters / decoders the CORIO®matrix simplifies and centralizes the control of all of these functions.

Control and configuration of the CORIO®matrix can be done via API via RS-232 or IP interface (try our free Crestron / AMX modules or write your own via public API). Alternatively, an internal web interface provides full configuration and control.

The unit is housed in a standard 4RU rackmount case and features an optional redundant hot swappable internal PSU and power inlet.

### Advanced Features

The CORIO®matrix includes an optional and unique monitoring module. This module will create a thumbnail composition previewing all your inputs and outputs (including embedded audio channels). This monitoring module is configurable and has 2 DVI/HDMI outputs each can show different information/layouts relevant to your application.

Integral audio switching / embedding /de-embedding is provided as standard to route audio. An optional Audio Module can provide AES and analog or digital I/O breakout capabilities when linked to our A2-7300 range of audio break-out units. Audio routing control is implemented in the Web interface and available using the command line interface.

### Universal DVI

The universal DVI interface utilizes a single DVI-I connector to provide the following signal formats: HDMI, DVI-I, plus analog YUV, YPbPr, RGBHV, RGBS, RGsB, Y/C and Composite Video. A variety of adapters are available to convert from DVI-I to other connectors.

### Universal DVI Modules

tvONE Universal DVI modules allow for direct connections to most common analog or digital sources and destinations.

Custom DVI-I adapters provide connections for: Composite, S-Video, component, VGA, RGBHV and HDMI (DVI-D connects directly).

A DVI module provides 2 connections per AV Slot.

- Universal DVI Input Module
- Universal DVI Scaling Output Module, supporting virtually any PC or HDTV resolution.

### HDBaseT Modules

- HDBaseT Scaling Output Module - 2 HDBaseT Outputs w/Ethernet
- HDBaseT input module - 2 HDBaseT Inputs w/Ethernet

### SDI Modules

- 3G/HD/SD-SDI Input Module - 2 Inputs
- HD/SD-SDI Input Module - 4 Inputs
- 3G/HD/SD-SDI Input Module – 4 Inputs
